SUBJECT: **RESPONSE TO MOTION ON PUBLIC HEALTH EMERGENCY
PREPAREDNESS CAMPAIGNS AND ASSOCIATE OUTREACH EFFORTS TO
ENGAGE DIVERSE COMMUNITIES**

On July 5, 2011, your Board of Supervisors directed the Chief Executive Officer and the Director of Public Health to report back to the Board within four weeks on the current and planned Los Angeles Public Health Emergency Preparedness Campaigns and the associate outreach efforts to engage the diverse communities in our County (Asian, Hispanic, Armenian, and African American, among others) in preparedness and resilience building activities.

Attached is the report on the Department of Public Health's (DPH) planned efforts related to community engagement and community resilience programs focused on the diverse racial/ethnic communities in Los Angeles County. The report entitled, *Community Outreach and Engagement to Diverse Populations at the Los Angeles County Department of Public Health (DPH)*, presents some of the current outreach and engagement strategies and approaches with these populations.

If you have any questions or would like additional information, please let me know.

I. EXECUTIVE SUMMARY

In 2009, the H1N1 Influenza Pandemic prompted the Los Angeles County (LAC) Department of Public Health (DPH) to mobilize a large scale response that continued throughout the year and well into 2010. This response included public messaging, the distribution of nearly four million doses of vaccine to almost 4,000 providers, and direct vaccination of over 230,000 individuals at 109 Points of Dispensing (PODs). The Pandemic also provided a unique opportunity for DPH to thoroughly evaluate its disaster preparedness and response capabilities. RAND Corporation conducted a thorough After Action Review (AAR) of DPH's response operations and identified areas for improvement.

DPH's current and planned Community Engagement and Community Resilience programs and activities are in direct response to the AAR and to the recognition that connections can be strengthened with the numerous diverse communities within LAC. Asian, Hispanic, Armenian, African-American, and other racial/ethnic groups are aided by specific outreach strategies to inform and engage them in preparedness and resilience building activities. This report presents some of our current outreach and engagement strategies and approaches with diverse populations. These projects include two public media campaigns, the Stay Healthy. Vaccinate. Campaign (*VaccinateLA*) and the Prepare2Respond Campaign, as well as numerous efforts build relationships with external partners, and assess the preparedness and response needs of diverse populations.

The *VaccinateLA* campaign is multi-media campaign that encourages parents and other caretakers to vaccinate their young ones. The campaign promotes vaccine literacy through social media venues like YouTube, Twitter, a website (www.vaccinatela.com) and Facebook. Goals of the campaign include: improving perception of DPH as a trusted messenger of health information, improving acceptance of childhood immunizations and immunization rates among caretakers of persons ages 0-24, including Tdap (Pertussis) and flu, developing messaging and materials that visually reflect LA County's diversity, and developing messaging and materials that meet the language needs of diverse populations (e.g. English, Spanish, Korean, Mandarin, Tagalog, Thai, Farsi, Armenian, and Russian). *VaccinateLA* messaging and visuals are so popular that California Department of Public Health picked them up for its efforts and the State of Indiana is exploring doing the same.

The *Prepare2Respond* campaign is a comprehensive, culturally and linguistically appropriate multi-media campaign that encourages community-level preparedness and resiliency. Developed over the last six months and launched in July 2011, this campaign represents a paradigm shift from a singular focus on individual-level preparedness to a broader community-level preparedness message. This is now the umbrella message that links to and connects with DPH's comprehensive community preparedness and response activities. Lessons from Hurricane Katrina and other more recent disasters teach us that government help will often be delayed, and that immediately following a disaster, neighbors will be the first responders. As such, building community capabilities is a core message. While making a plan or a kit is a component of preparedness, it is an incomplete strategy. The message at the heart of the campaign is that in a disaster, the people that surround you will become your first responders. All Prepare2Respond messages will link to a revised preparedness

website that provides detailed information about Emergency Preparedness and Response resources in LAC and key updates and community events.

Vaccine literacy is at the core of preparedness and engagement, and builds awareness and trust directly with community members and organizational partners. The DPH project with the Child Care Resource and Referral (R&R) Centers is another large-scale intervention aimed at improving vaccine literacy and broader community understanding of community preparedness. Through this project, DPH built on the capacity of R&R Centers in LAC and their associated child care centers and providers to administer vaccine to at-risk, low-income and ethnically and linguistically diverse children and their families. In February 2011, prior to the initiation of vaccine clinics, contracted and subcontracted agencies were provided with an Influenza 101 Presentation which provided an overview of influenza infection, containment and prevention strategies. A Pertussis (Tdap) 101 course was provided to all contracted and subcontracted agencies in May 2011. As of mid-July 2011, 15 Tdap clinics have been conducted by the R&R agencies and approximately 1000 doses have been administered. Additionally R&R network staff participated in Vaccination/Pandemic Flu and Emergency Preparedness Train-the-Trainer Workshops and trainings are currently being held for internal R&R staff.

An additional strategy to help engage diverse communities is the Los Angeles County Community Disaster Resilience Project (LACCDR), which is designed to improve the capacity of local faith-based and community-based organizations to respond to emergencies. In partnership with Emergency Network Los Angeles (ENLA), RAND Corporation, and University of California, Los Angeles's Center for Health Services and Society, LACCDR has developed an expanding network of community agencies that work consistently with the DPH and ENLA to develop community resilience within the context of public health disasters. The project has allowed DPH to connect with key constituents throughout the County, including specific underserved communities such as vulnerable populations, families with children, and faith-based organizations. Three community preparedness and resilience stakeholder groups are currently working to engage community partners more fully in emergency preparedness and activities that build resilience. The three workgroups, Communications/Information, Community Partnerships and Vulnerable Populations, are identifying existing social networks, services and resources that can be dually used for improving emergency preparedness and resilience or otherwise leveraged toward the goal of increasing preparedness in diverse communities and among vulnerable populations. The three topic areas are critical for DPH to better in order to fulfill the responsibilities outlined in the CDC Community Resilience Capabilities (Community Preparedness and Community Recovery) in the COMMUNITY RESILIENCE: BACKGROUND AND DEFINITIONS below.

As DPH continues working to achieve the CDC's Public Health Preparedness Capabilities on community resilience, it will broaden and deepen its engagement of diverse communities, connect with multiple programs throughout DPH and further develop connections and coordination with other County Departments such as Office of Emergency Management and the Department of Mental Health.

II. BACKGROUND

In 2009, the H1N1 Influenza Pandemic prompted the Los Angeles County (LAC) Department of Public Health (DPH) to mobilize a large scale response that continued throughout the year and well into 2010. This response included public messaging, the distribution of nearly 4 million doses of vaccine to almost 4,000 providers, and direct vaccination of over 230,000 individuals at 109 Points of Dispensing (PODs). The Pandemic also provided a unique opportunity for DPH to thoroughly evaluate its disaster preparedness and response capabilities. RAND Corporation conducted a thorough After Action Review (AAR) of DPH's response operations and identified areas for improvement.

DPH's current and planned Community Engagement and Community Resilience programs and activities are in direct response to the AAR and to the recognition that connections can be strengthened with the numerous diverse communities within LAC. Asian, Hispanic, Armenian, African-American, and other racial/ethnic groups are aided by specific outreach strategies to inform and engage them in preparedness and resilience building activities. This report presents some of our current outreach and engagement strategies and approaches with diverse populations.

III. COMMUNITY RESILIENCE: BACKGROUND AND DEFINITIONS

DPH's Community Engagement and Resilience efforts are based on The Centers for Disease Control and Prevention's (CDC) new Public Health Preparedness Capabilities. The CDC's Public Health Preparedness Capabilities are national standards for state and local health departments to plan for community resilience. Community resilience is the capacity of the community as a whole to prepare for, respond to and recover from adverse events and unanticipated crises that threaten the health of all.

The first two of the 15 CDC Capabilities are directly addressed in our community resilience efforts. Capability 1 is "Community Preparedness" and it includes four functions: 1) determine risks to the health of the jurisdiction, 2) build community partnerships to support health preparedness, 3) engage with community organizations to foster public health, medical, and mental/behavior health social networks, and 4) coordinate training or guidance to ensure community engagement in preparedness efforts. Resilience needs to be built before a disaster and is critical to the recovery of a community after a disaster. Capability 2 is "Community Recovery." Its three functions parallel those of Capability 1 and include 1) identifying and monitoring recovery needs, 2) coordinating community health and health system recovery operations, and 3) implementing corrective actions to mitigate damages. Together, the Community Preparedness and Community Recovery Capabilities comprise community resilience.

DPH has undertaken a variety of activities that promote community engagement with ethnically diverse populations and special needs groups to increase preparedness over the course of the past year. These projects include two public media campaigns, the Stay Healthy. Vaccinate. Campaign and the Prepare2Respond Campaign, as well as focused efforts build relationships with external partners, and assess the preparedness and response needs of diverse populations. Figure 1, below, illustrates the three strategies that comprise DPH's community preparedness and resilience efforts: Community Outreach, New Relationships and Capacity Building, and Risk-based Planning Initiatives.

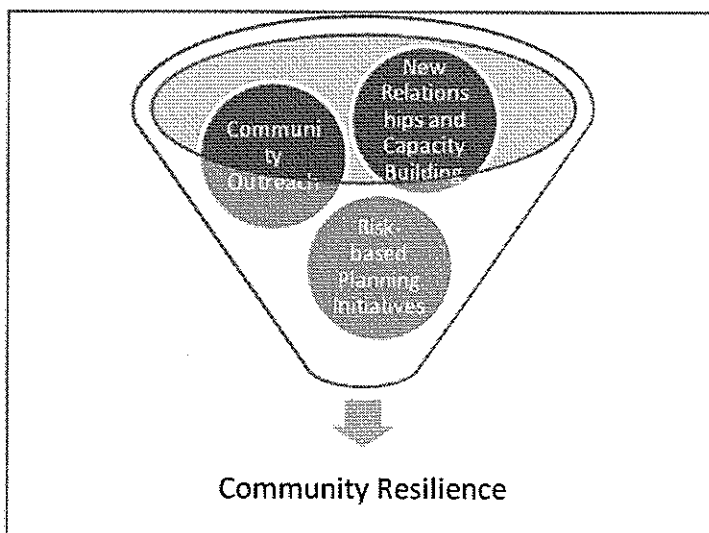

Figure 1: Visual Representation of DPH Community Resilience Strategies

IV. COMMUNITY OUTREACH

Vaccine literacy is at the core of preparedness and engagement, and builds awareness and trust directly with community members and with organizational partners. In the long term, the norming of vaccine behavior and resultant increase in vaccine uptake in diverse populations will enable successful provision of other Medical Counter Measures such as antibiotics to anthrax exposure, a key element of any large-scale emergency response. DPH has engaged in several large-scale interventions aimed at improving vaccine literacy and broader community understanding of community preparedness: the Stay Healthy. Vaccinate. Public Education Campaign, the Prepare2Respond Public Education Campaign and the project with Child Care Resource and Referral Centers in LAC.

A. Stay Healthy. Vaccinate. Campaign (VaccinateLA)

The multi-media campaign encourages parents and other caretakers to vaccinate their young ones with taglines such as, “You can protect your loved ones and community from serious illnesses like flu and whooping cough. Don’t wait. Vaccinate.” The campaign uses social media like YouTube, Twitter, a website (www.vaccinatela.com) and Facebook to conduct vaccine literacy. *VaccinateLA* messaging and visuals are so popular that California Department of Public Health picked them up for its efforts and the state of Indiana is exploring doing the same. Campaign creative can be seen in Figures 3 through 7.

Campaign Goal: Caretakers of persons ages 0-24 perceive vaccination across the lifespan as “the norm.”

Campaign Objectives:

- Improve perception of DPH as a trusted messenger of health information.
- Improve acceptance of childhood immunizations among caretakers of persons ages 0-24, including Tdap (Pertussis) and flu.
- Improve immunization rates among caretakers of persons ages 0-24, including Tdap and flu.
- Develop messaging and materials that visually reflect LA County’s diversity.
- Develop messaging and materials that meet the language needs of diverse populations (e.g. English, Spanish, Korean, Mandarin, Tagalog, Thai, Farsi, Armenian, and Russian).

CONTRACTOR	ROLE
CBS	Media buys: <ul style="list-style-type: none"> • CBS Radio and Online • Partnerships (outreach to clients, media exposure) • Community newspapers and magazines • Bus ads (bulletins, bus tails, Transit TV)
Edelman	Creative concept development, project management, outreach to the General Market and to Eastern European Market (through a subcontract with Hye Media)
LAGRANT	Creative content and outreach to African-American and Hispanic populations, including a unique outreach opportunity and social media day with Lisa Leslie of the WNBA.
SAESHE	Creative content and outreach to Asian Pacific Islander populations

DPH worked with the Edelman, LAGRANT and SAESHE to target different segments of the media market, expand existing communication channels and templates to disseminate new CDC flu and California state TDap guidance relating to universal vaccination, personal protective precautions, and infection control. *VaccinateLA* was funded by the CDC through one-time-only Public Health Emergency Response (PHER) funding.

Edelman

Edelman is a global public relations firm with 52 offices, more than 3,200 employees and dozens of affiliates around the world, with a dedicated healthcare practice team based in Los Angeles. Edelman's professionals have worked in healthcare delivery, administration, regulation and communications, offering DPH an insider's perspective of the industry. Its understanding of the opportunities and challenges facing healthcare organizations has been built through years of working with patients, researchers, providers, employers, payors, advocacy groups, regulatory entities, professional associations and the media. Most recently, Edelman led the California Department of Alcohol and Drug Programs' *Me Not Meth* campaign, and Kaiser's *THRIVE* program.

Edelman lead collaborative efforts with DPH and other *VaccinateLA* firms to effectively reach the general and segmented markets by developing and implementing a comprehensive, culturally, and linguistically appropriate media campaign via multiple communication channels (e.g. public service announcements, social media platforms, outdoor media).

LAGRANT Communications

LAGRANT Communications is a multicultural agency based in Los Angeles that targets two of the most dominant communities in LAC – Hispanics and African-Americans. With more than 20 years of experience serving the needs of these communities, LAGRANT Communications has the bilingual and bicultural staff and necessary experience to effectively target these communities in a culturally relevant way that respects and

understands the nuances and barriers that exist regarding vaccinations. LAGRANT Communications worked collaboratively with DPH and other *VaccinateLA* media vendors to effectively reach the general market as well as African-American and Hispanic communities. LAGRANT coordinated a social media opportunity on Facebook and Twitter with Lisa Leslie, all-star of the Women's National Basketball Association (WNBA).

SAESHE

SAESHE is an integrated marketing, advertising and public relations agency based in Los Angeles that represents almost every Asian American subgroup. SAESHE's marketing experts leverage their first-hand cultural experience to develop and implement hard-hitting marketing plans that effectively engage the Asian American market. With the ability to identify and consider the smallest cultural nuances that often go undetected, SAESHE merges history, tradition, and contemporary Asian and Asian American culture to create communication solutions that produce results. As such, SAESHE was uniquely qualified to develop customized messages and materials as part of a comprehensive immunization and flu prevention media campaign that reaches the Asian American market.

Outreach Strategy

VaccinateLA outreach teams were present at various small, medium and large-scale community events throughout LAC between April and July 2011, including:

- 113th Philippine Independence Day Celebration
- Brittney Spears Concert
- City of Commerce Community Services Department Summer Safety Fair 2011
- City of Lawndale Health & Safety Fair
- City of Los Angeles Open House
- Fiesta Hermosa
- Homenentmen Navasardian Games
- Viva Los Dodgers
- Wango Tango

Paid Media was placed in a variety of community newspapers and online forums, radio and television, including:

- Al-Alam (Arab World)
- Armenian Life
- Chinese LA Daily News
- Facebook
- Hafteh Bazaar
- KHIZ TV
- 102.7 KIIS FM
- 107.5 KLOVE FM
- Korea Daily
- Korea Herald Business
- Los Angeles Sentinel

- Monterey Park Comet
- AM 1110 Radio Disney
- Twitter
- Vida Nueva

For a full list of *VaccinateLA* outreach activities, please see Appendix A.

Figure 3: English/General Market/Asian Pacific Islander Market/Billboard

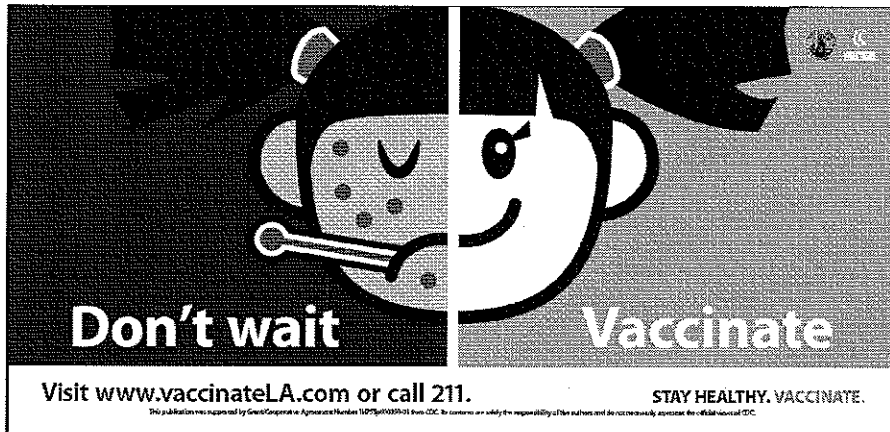

Figure 4: Spanish/Hispanic Market/Billboard

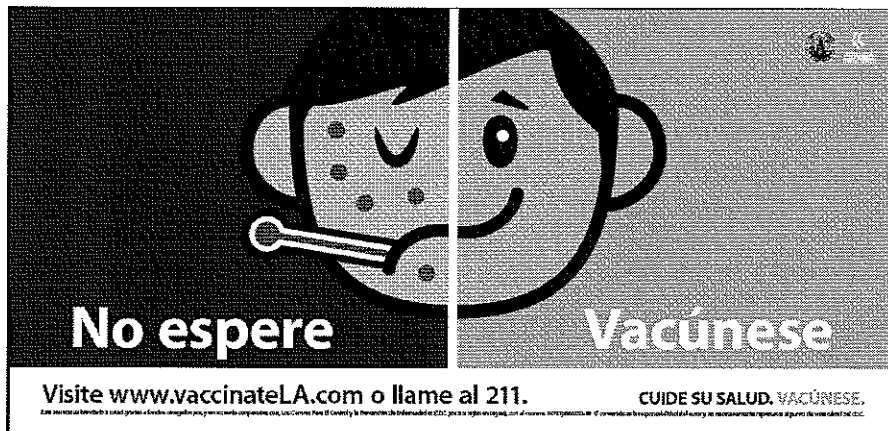

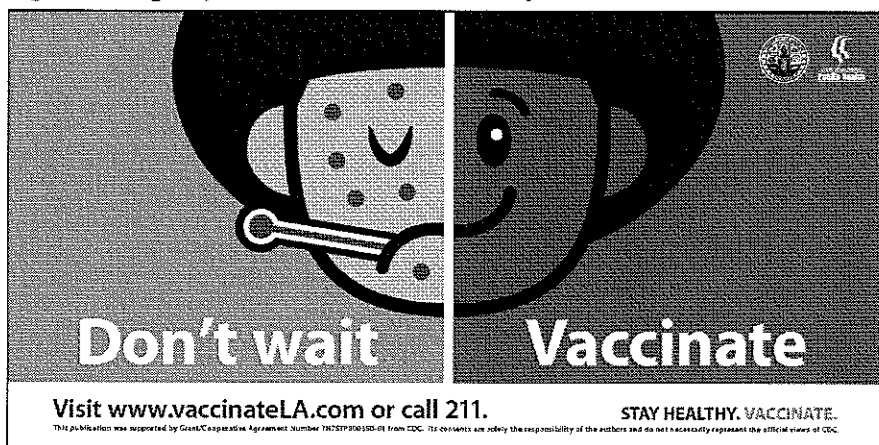

Figure 5: English/African-American Market/Billboard

Вакцинация является самым эффективным методом защиты детей, подростков, взрослых и престарелых от серьезных заболеваний. Она также помогает распространению вредных привычек: употребления алкоголя и сигарет, как правило, в семье. Вы можете легко узнать какие прививки наиболее подходят вам и вашим близким, позвонив доктору или в клинику. Но для нашего же здоровья и самочувствия не ждите.

Посетите www.vaccinateLA.com или позвоните 211. Будьте здоровы! Вакцинируйтесь!

* На территории штата Калифорния действует программа вакцинации детей и подростков (HPV, Hepatitis A, Hepatitis B, Tetanus, Diphtheria, Pertussis, Polio, Pneumonia, Rubella, Varicella, Measles, Mumps, and Whooping Cough). Для получения информации о вакцинации детей и подростков, пожалуйста, обратитесь к своему врачу.

Figure 7: Korean/Asian Pacific Islander Market/Website

Edelman, LAGRANT and SAESHE worked in connection with DPH-approved spokespersons and subject matter experts such as Doctor Oliver Brooks of Watts Healthcare Corporation, Felix Aguilar of South Central Family Health Center, and Alvin Nelson of DPH to reach the various market segments.

B. Prepare2Respond Campaign

The multi-media campaign, *Prepare2Respond*, is a comprehensive, culturally and linguistically appropriate multi-media campaign that encourages community-level preparedness and resiliency. Developed over the last six months and launched in July 2011, this campaign represents a paradigm shift from a singular focus on individual-level preparedness to a broader community-level preparedness message. This is now the umbrella message that links to and connects with DPH's comprehensive community preparedness and response activities.

As recent events around the world remind us, disasters rarely affect just a single person or household: devastation impacts entire neighborhoods and communities. In a disaster, the people that surround you – your neighbors and fellow community members - will be the ones that you turn to for immediate help. And very likely, they will turn to you. Communities educated in proper emergency response procedures typically suffer fewer serious injuries, less loss of life and reduced property damage. Thus, the purpose of the

campaign is to provide messages and trainings to connect residents to tools, resources and trainings that will help communities be prepared.

Lessons from Hurricane Katrina and other more recent disasters teach us that government help will often be delayed, and that immediately following a disaster, your neighbors will be your first responders. As such, building community capabilities is a core message. While making a plan or a kit is a component of preparedness, it is an incomplete strategy. The message at the heart of the campaign is that in a disaster, the people that surround you will become your first responders. All Prepare2Respond messages will link to a revised preparedness website that provides detailed information about Emergency Preparedness and Response resources in LAC and key updates and community events. Campaign creative can be seen in Figures 9 through 11.

Campaign Goal: Introduce the public to the idea that in an emergency, strong communities are the key to survival.

Campaign Objectives:

- Improve perception of DPH as a trusted messenger of emergency preparedness and response information.
- Have neighbors get to know each other to bolster preparedness in the community
- Develop messaging and materials that visually reflect LAC’s diversity.
- Develop messaging and materials that meet the language needs of diverse populations, especially low literacy materials in multiple languages (Chinese, English, Korean, Russian, and Spanish).
- Link residents to website with further information.
- Guide further outreach and engagement by DPH staff.

Prepare2Respond urges residents to consider the most vulnerable in their communities – the seniors, families with young children or pets— and develop neighborhood emergency plans. The campaign was funded by the CDC through the Public Health Emergency Preparedness Grant.

Barbara Bishop Public	Creative concept development, project management, outreach to the General Market

CONTRACTOR	ROLE
Relations, Inc.	

Barbara Bishop Public Relations, Inc. (BBPR)

BBPR is a public relations firm, with more than 25 years of experience in the field of public relations, public education and community outreach. Their expansive portfolio includes emergency preparedness-related projects with clients such as Children's Hospital Los Angeles and Saint John's Hospital in Santa Monica. BBPR also has significant experience working with the public sector as demonstrated by decade's long relationships with LA County's Sanitation District and DPH's Office of AIDS Programs and Policy. BBPR was responsible for assuring collaboration between media contractors who were involved in developing the campaign's social media components as well as purchasing space ad placements using multiple communication channels (e.g. print, radio, television and outdoor).

LITCO Marketing

LITCO Marketing is an advertising agency with over 40 years of experience in a variety of industries from public service to entertainment. Their expansive portfolio includes clients such as Cedars-Sinai Medical Center, Saint John's Health Center and Volunteers of America. LITCO Marketing was responsible for developing multilingual advertising and purchasing space for ad placement using multiple communication channels including print, radio, television and outdoor billboards.

Outreach Strategy

Core messages were developed with community focus groups such as the one with Healthy African-American Families in Leimert Part in June, that represent the diverse populations we intend to reach. In addition, *Prepare2Respond* outreach teams were present at many small, medium and large-scale community events throughout LAC between July and August, including:

- Feria Agostina
- Homenetmen Navasartian
- AM 790 KABC Dodger Day
- Korean BBQ Cook Off
- Lotus Festival
- Nike 3 on 3 Tournament

Media was placed in a variety of community newspapers and online forums, radio and television, including:

- Asbarez
- Chinese Daily
- Facebook
- AM 1600 KAHZ
- Korean Daily
- 102.3 KJLH FM

- 100.3 KSWD FM
- La Opinion
- Los Angeles Times
- The Sentinel
- Twitter

Radio and Television Interviews were secured with:

- AM 980 KFWB
- KCBS TV
- KMEX TV
- 100.3 FM The Sound

For a full list of *Prepare2Respond* media activities, please see Appendix B. Other activities will be scheduled throughout the year.

**COUNTY OF LOS ANGELES
Public Health**

IV. BUILDING ORGANIZATIONAL PARTNERSHIPS AND CAPACITY FOR PREPAREDNESS

The second aim of DPH's community preparedness efforts is building organizational partnerships and capacity for preparedness. *VaccinateLA* and *Prepare2Respond* utilize the venues of media and direct outreach to the public, but that is just one strategy to engage the community. Another strategy is establishing new organizational relationships with agencies DPH had not previously engaged in emergency preparedness in the community.

Currently, DPH has two projects underway that support this goal: a pilot project with Child Care Resource and Referral Centers in LAC and another pilot project to improve the capacity of local faith-based- and community-based organizations to respond to emergencies. These partnerships are a rich resource for community-level preparedness now that the relationships have been established.

A. Child Care Resource and Referral (R&R) Centers

This pilot project built on the capacity of R&R Centers in LAC and their associated child care centers and providers to administer vaccine to at-risk, low-income and ethnically and linguistically diverse children and their families. The purpose of this pilot project was improve the pandemic and emergency preparedness of child care providers and the children and families they serve through a coordinated and established network of R&Rs. To accomplish this, the DPH contracted with two R&Rs that are part of the Resource and Referral Network (RRN) in LAC, The Child Care Resource Center LA (CCRC) and the Mexican American Opportunity Foundation (MAOF), and a third party, Maxim Health Systems (Maxim), to provide all vaccinations. DPH used vaccines to engage communities, schools, and R&R centers prophylactically, so that future epidemic responses could follow this positive precedent: community members know where to turn for help and countermeasure dispensing, and the County enjoys established, trusted relationships with the community it serves.

Children in child care represent a critical vaccine priority population and a double influenza burden. They have the highest risk for contracting the disease (low age specific population immunity), and the highest risk for disease transmission throughout their households and communities. Based on available evidence and experience from past pandemics, it is likely that future pandemics will continue to cause serious disease in younger age groups.

In February 2011, prior to the initiation of vaccine clinics, contracted and subcontracted agencies were provided with an Influenza 101 Presentation which provided an overview of influenza infection, containment and prevention strategies. The presentation was conducted by a Public Health Nurse from DPH's Immunization Program. Vaccinating agencies were provided with scheduling and vaccine clinic procedures developed jointly by DPH, Maxim and the contracted agencies. Extensive outreach and education was conducted and education materials distributed that were developed by the contracting agencies and

translated. During March and April 2011, 50 influenza vaccination clinics were coordinated by five different R&R agencies and approximately 1,850 influenza vaccinations were delivered.

A Pertussis (Tdap) 101 course was provided to all contracted and subcontracted agencies in May 2011. As of mid-July 2011, 15 Tdap clinics have been conducted by the R&R agencies and approximately 1000 doses have been administered. Additionally R&R network staff participated in Vaccination/Pandemic Flu and Emergency Preparedness Train-the-Trainer Workshops and trainings are currently being held for internal R&R staff.

An evaluation of the project will be completed that provides recommendations and strategies to strengthen the readiness and capability of the R&Rs to be a strategic DPH response partner for a range of public health emergency events including a pandemic. The report will include observations completed at vaccination clinics, client surveys, train-the-trainer participant evaluations, focus group findings conducted with child care staff and complete demographic data of clinic participation.

B. Los Angeles County Disaster Resilience Project (LACCDR)

An additional strategy to help engage diverse communities is the LACCDR, which is designed to improve the capacity of local faith-based- and community-based organizations to respond to emergencies. In partnership with Emergency Network Los Angeles (ENLA), RAND Corporation in Santa Monica and Arlington, and UCLA's Center for Health Services and Society, LACCDR has developed an expanding network of community agencies that work consistently with the DPH and ENLA to develop community resilience within the context of public health disasters. Overall, the goal is to strengthen the network of community agencies working together with DPH and ENLA to better serve and strengthen disaster resilience of local communities and to develop effective approaches, such as messages, hazard-specific information and outreach, to support resilience. The project has allowed DPH to connect with key constituents throughout the County, including specific underserved communities such as vulnerable populations, families with children, and faith-based organizations.

Over the past year, the project focused on:

- Assessing current practice of DPH and community agencies related to community resilience and current engagement with diverse communities in building resilience;
- Developing new community partnerships to support community preparedness and resilience in LAC;
- Identifying strategies to strengthen DPH, ENLA and community agency capacity and leadership to support community preparedness and resilience; and
- Supporting the capacity of ENLA, a county-wide Voluntary Organization Active in Disasters (VOAD) to greatly extend its membership of community-based organizations and faith-based organizations that are committed to community preparedness.

Three community preparedness and resilience stakeholder groups are currently working to engage community partners more fully in emergency preparedness and activities that build resilience. The three workgroups, Communications/Information, Community Partnerships and Vulnerable Populations, are identifying existing Community Outreach and Engagement to Diverse Populations

social networks, services and resources that can be dually used for improving emergency preparedness and resilience or otherwise leveraged toward the goal of increasing preparedness in diverse communities and among vulnerable populations. The three topic areas are critical for DPH to better in order to fulfill the responsibilities outlined in the CDC Community Resilience Capabilities (Community Preparedness and Community Recovery).

Communications/Information Work Group

Strong communication is critical to a smooth and productive disaster recovery process. Communities that are poorly connected or networked before and during a disaster experience greater difficulty during recovery. The Communication and Information work group focuses on communication strategies, resources, and partnerships that enhance community disaster resilience in LAC, with particular attention to shaping disaster communication messages with a focus on whole community engagement and not simply individual or household preparedness only.

Goals of this work group include:

- Frame community resilience in plain language so that residents and communities have adequate understanding and 'buy in';
- Identify strategies that will help in the adoption of these messages;
- Inform the DPH's *Prepare2Respond* campaign and DPH's related outreach strategies;
- Help develop new messages supporting community resilience that will enhance public and private partnership; and
- Encourage the nonprofit, public and private sectors to collaborate to achieve greater community resilience and increased levels of community preparedness.

Organizations represented in this work group include:

- COPE Preparedness
- Didi Hirsch Community Mental Health Center
- Do Your Part
- Filipino American Service Group
- South Bay Emergency Communication

Community Partnerships Work Group

In the aftermath of a disaster, the formal mechanisms to achieve public health goals may be damaged, making strong community partnerships and networks key in the early stages of recovery. The goal of this work group is to bring together representatives from different organizations, including those not specifically focused on emergency preparedness, to partner with DPH on network development strategies and to identify social/psychological and organizational resources already available in the communities.

Goals of this work group include:

- Build effective community disaster partnerships
- Increase resources available to build organizational and social capacity around preparedness and recovery
- Assess current community partnerships/organizations working on issues related to adverse public health events such as:
 - Prevention
 - Survival / Endurance
 - Mitigation of the effects
 - Recovery

Organizations represented in this work group include:

- Community Clinic Association
- Healthy African-American Families
- Tzu Chi Foundation
- USC Center for Religion and Civic Culture
- West Angeles Church of God in Christ

Vulnerable Populations Work Group

Vulnerable populations are at increased risk of harm from a disaster as they are least able to take advantage of standard public health resources in preparedness planning, response, and recovery and are a special focus of the CDC funding. Attempts to identify vulnerable populations focus on specific demographic populations (e.g. children or racial and ethnic minorities) and/or populations with functional limitations or disabilities (e.g. mobility, cognition, medical dependence). However, vulnerability is a function of factors related to the community, the capabilities of local planners, and the emergencies they confront, which may change at each stage of a disaster. Thus, who is vulnerable and when may differ from community to community.

Communities can best cope with disasters when they reduce their vulnerabilities and ensure their populations are physically and psychologically healthy, able to understand risk communication messages, looking out for one another in times of crisis, and are engaged as full partners in disaster related planning. The Vulnerable Populations work group is identifying the specific populations in LAC that are vulnerable to public health emergencies, developing clear metrics to determine vulnerability, and identifying strategies that will improve preparedness in specific vulnerable populations.

Organizations represented in this work group include:

- Esperanza
- LA County DPSS
- Salvation Army
- St. Vincent de Paul

- Valley Village

Risk-based Planning Initiative

DPH has been selected as one of 10 pilot sites in the nation for special Risk-based Planning Initiative funding in 2011-2012. Risk-based funding is a new allocation of financial resources from the CDC to develop accelerated risk reduction strategies to mitigate public health risks in large metropolitan areas. The Risk-Based Planning Initiative will assist in building a systematic and coordinated approach for addressing the unique hazards, vulnerabilities and assets in major urban areas like Southern California. This initiative will lead to an enhanced and sustainable regional capacity to prevent, protect against, respond to, and recover from a range of public health hazards facing the Los Angeles-Long Beach-Santa Ana Metropolitan Statistical Area. As part of this work, DPH will involve community members in the hazard vulnerability assessment and the identification of community assets, and into the training and exercising of emergency plans. DPH will work with Board offices and District offices to conduct outreach and engagement in these efforts.

DPH will continue to work with RAND and UCLA to improve understanding of community-based assets, capabilities and limitations, evaluate social networks, develop methods for community-based organization/faith-based organization networks to prepare and disseminate messages, assess community engagement, commitment and skills among key partners, and identify opportunities for involvement of stakeholder agencies. DPH will develop tools for community collaborative hazards, vulnerability, and asset mapping. DPH will also use current Census and other survey data to identify, estimate and map at-risk populations. The findings from these projects will be incorporated into a revised hazards vulnerability assessment that will form the basis for prioritization of issues, plans and exercises with partners to build capabilities that can potentially help to mitigate identified issues/risks in the Southern California Metropolitan Statistical Area.

V. CONCLUSION/NEXT STEPS

In the 18 months following our H1N1 AAR, DPH has undertaken a variety of projects that promote community engagement with ethnically diverse populations and special needs groups. These projects include two public media campaigns, the Stay Healthy. Vaccinate. Campaign and the Prepare2Respond Campaign, as well as numerous efforts build relationships with external partners, and assess the preparedness and response needs of diverse populations. As DPH continues working to achieve the CDC's Public Health Preparedness Capabilities on community resilience, it will broaden and deepen its engagement of diverse communities, connect with multiple programs throughout DPH and further develop connections and coordination with other County Departments such as Office of Emergency Management and the Department of Mental Health.

Campaign Rationale

Edelman

Edelman is the world's largest independent public relations firm, with wholly owned offices in 54 cities and 4,000 employees worldwide. Edelman is rooted in health. Edelman has one of the well-respected healthcare practices in the world. The company's professionals have worked in healthcare delivery, administration, regulation and communications, offering clients an insider's perspective of the industry. The team's understanding of the opportunities and challenges facing healthcare organizations has been built through years of working with patients, researchers, providers, employers, payors, advocacy groups, regulatory entities, professional associations and the media. Edelman is dedicated to helping clients generate understanding and actions to improve health and lives in local, national and global communities.

Clear Channel

Clear Channel Radio is the leader in Los Angeles delivering over 10 MILLION listeners each week on-air and online with our 8 Radio Stations and Total Traffic Network. Radio is extremely effective medium in Los Angeles as people live in their cars - 95% of people 12+ listen to radio every week. Our stations are uniquely programmed and serve the general market in the Los Angeles communities. Clear Channel has successful track record of managing and fulfilling past LA County Media Campaigns. In addition, Clear Channel does not take an agency commission (most media agencies take a 15% commission off the top of your budget for their fees). The placement of media is the sole source of compensation, which will extend your budget and will act as the agency for added value, facilitating partnerships with all designated partners.

Campaign Rationale

LAGRANT COMMUNICATIONS is a premier multicultural agency based in Los Angeles and one of the few public relations, advertising and marketing firms in the county that targets two of the most dominant communities in Los Angeles County – Hispanics and African Americans. With more than 20 years of experience, LAGRANT COMMUNICATIONS has the staff and experience to effectively target these communities in a culturally relevant way that respects and understands the nuances and barriers that exist regarding vaccinations. The firm has healthcare experience with a variety of esteemed health organizations that include efforts targeting women, such as the Robert Wood Johnson Foundation, American Cancer Society, California Department of Health Services, Los Angeles County Department of Health Services, Planned Parenthood, CoverMe Foundation, Albertsons Sav-On, among others.

Campaign Rationale

CAMPAIGN OBJECTIVES

1. Effectively communicate preventative health information messaging and reach at-risk audiences
2. Provide program oversight and management

TOP-LINE RESULTS

1. HYE Media Agency Reached out to and educated several members of the Armenian-American, Russian-American, Iranian-American, Arabic-American communities about the importance of executing the message of "Stay Healthy, Vaccinate" campaign and as such, encouraged them to get vaccinated.
2. HYE Media Agency also specifically encouraged members of Armenian-American, Russian-American, Iranian-American, Arabic-American communities to urge their loved ones to get vaccinated along with them.
3. HYE Media Agency Reached out to and educated several members of the Armenian-American, Russian-American, Iranian-American, Arabic-American communities about the importance of keeping their hands clean; covering their mouth when coughing.
